

## Play Cards

### Exploring Science on the Playground

Play Cards are a kid-friendly family guide to transforming your playground into a laboratory for exploring the science we experience when we go outside to play. Each set includes a set of 25 illustrated cards that guide users through an easy scientific process of wonder and inquiry. Use these cards to discover science all around!

### General guidelines for using the Play Cards with your family and friends

**Break it up:** take just three or four Play Cards out with you at a time, don't go through the whole deck at once.

**Share 'em:** use the Play Cards in groups—enjoy them with your family and with friends.

**Play along:** read the cards before using them with kids, then share what you've learned rather than reading straight from the card.

**In and out:** Use the Play Cards outside and indoors.

**Think big!** Where else in the city can you talk to children about science?
